# HOW TO CONNECT INTELLICUT GLOBAL TO THE AEROCUT X AND AEROCUT X PRO

### PROGRAMMING THE AEROCUT NETWORK CARD

#### Installing and Configuring WIZNET

A utility called WIZNET is provided with Intellicut Global in order to associate a valid local IP address with your Aerocut, which can then be entered into Intellicut Global so that the software may identify and communicate with your AeroCut Slitter/Cutter/ Creaser.

After installation of Intellicut Global, you will find file WIZ1xxSR\_Config.zip in your Intellicut Global Program Files folder (or can download it from the link in step 1). Unzip this file and then Run Install.exe in the WIZ1xxSR\_Config\_v.3.0.2\_install folder. Once it is installed, run the WIZ1x0SR\_105SR\_CFG\_V3\_0\_2 file in the WIZ1xxSR\_config\_v3.0.2\_src folder.

#### **Programming the Aerocut**

- Ensure your AeroCut is turned on and connected to your network through an Ethernet cable. Next run the WIZNet tool: WIZ1x0SR\_105SR\_CFG\_V3\_0\_2.exe
- 2. You will see an initial screen like this:

🍓 WIZ100SR/105SR/110SR Configuration Tool ver 3.0.2 — 🗌 🗙		
Version	Enable Serial Debug Mode	
Board list	Network Serial Option IP Configuration Method © Static C DHCP C PPPoE	
	Local IP Port Subnet Gateway PPPoE ID Password	
	Server IP Port Operation Mode Use UDP mode	
	Use DNS DNS Server IP	
Direct IP Search	Search Setting Upload Ping Firewall Exit	

- 3. Click on the Search button.
- Your AeroCut should be found on your network and listed in the Board list. Verify that the IP Configuration Method is Static and the Default Local IP of 192.168.11.2 and Port 5000 should display, as circled in red below.

🍓 WIZ100SR/105SR/110SR Configuration Tool ver 3.0.2 — 🗆 🗡		
Version 5.13	Enable Serial Debug Mode Not Connected	
Board list	Network Serial Option IP Configuration Method © Static © DHCP © PPPoE	
	Local IP 192.168.11.2 Port 5000	
	Subnet 255.255.255.0   Gateway 192.168.11.2	
	PPPoE ID	
	Server IP 192.168.11.3 Port 5000	
	Operation Mode C Client C Server © Mixed 🔲 Use UDP mode	
	Domain Name	
Direct IP Search	Search Setting Upload Ping Firewall Exit	

5. You must replace the default local IP with a valid static IP address from the your local network. Type this valid local address in the Local and Server IP fields. In the picture below the IP address of 10.10.10.18 was entered, which is a valid address for this user's network. The subnet and gateway should also be updated. Port of 5000 will always be used. The default IP of 192.168.11.2 cannot be used and must be changed. You must click on the Settings button at the bottom of the dialog to store any changes you make to the WizNet board.

Direct IP Search	Domain Name	d Ping Firewal	Exit	

6. Click on the Serial tab (shown below). The values shown above must match what is shown on your screen. Typically, the Speed defaults to 57600. Change this to 38400 using the drop-down. If any changes were made, click on the Setting button to store these values to your WizNet board. You may now close this software.

Direct IP Search	Search Setting Upload Ping Firewall Exit

- On the PC that has Intellicut Global we highly recommend that you configure that PC's ethernet as a Static IP address in your Windows Operating System. (Ethernet Properties -> Internet Protocol Version 4 (TCP/IPv4) Properties)
- 8. When attempting to communicate with the Aerocut via Intellicut Global for the first time, the IP address and Port # (5000) will be required. A good starting point to enter this information is by selecting Aerocut Manager from the Welcome Menu. All further communication will remember these settings, and should automatically connect, allowing for the storing of custom template information to your AeroCut, minimizing any possible errors.
